Sikadur®-42
High strength pourable epoxy resin grout

Description
Sikadur-42 is a 3-component pourable or castable grout, based on a solvent free epoxy resin and selected aggregates. Sikadur-42 cures to form a hardened mortar with excellent adhesion to many substrates. This combined with the product’s ease of application makes it ideally suited to site application.

Uses
As a grout for building and civil engineering application:
- Crane rails
- Machine bedding and baseplates
- Holding down bolts
- Stanchions
- Starter bars
- Cavity filling
- Bridge bearings
As a self smoothening mortar:
- Repairing and patching horizontal surfaces

Advantages
-Insensitive to moisture during application, cure or whilst in service
-Applicable at low temperatures down to 5°C.
-Available in two grades (Normal and Long Potlife).
-High early strength
-Excellent adhesion to a wide variety of dry and damp substrates such as concrete, stone, fibrous cement, synthetic resins, wood and most metals.
-High tensile and flexural strength, vibration resistant.
-Supplied in factory proportioned units
-Easily applied
-Unaffected by wide range of chemicals
-Good flow characteristics even in thin layers
-Proven in service over 30 years

Storage and Shelf Life
Minimum shelf life is approximately 3 years. Store under controlled conditions in original containers (minimum 5°C, maximum 35°C temperature range).

Instructions for Use

Surface Preparation
Mineral/Resin Substrates. Mechanically roughened, free from all contaminants (eg. dust, oils, grease, ice, etc.), surface water, laitance, old form oil, curing membrane and old coatings. Suitable methods of preparation include blast cleaning and scabbling (sanding/grinding on fibrous cement). All dirt must be removed from bolt by air blasting.

Wood. Mechanically cleaned, free from all contaminants (dust, oils, grease, etc.) surface water, stains, impregnants and old coatings.

Iron/Steel. Mechanically cleaned, free from all contaminants (dust, oils, grease, etc), coatings and corrosion products and surface water for maximum bond strengths. Suitable methods include blast cleaning to minimum standard SA2 AS 1627.9 or equivalent method to ST3 AS 1627.9.

Formwork
The formwork used must be leak proof to allow for the free flowing Sikadur-42. The formwork should be arranged so that the grout head is maintained on the filling side above the level of the underside of the base plate. This will allow gravity flow to completely fill the void to be grouted. Formwork should be coated with form oil to allow easy removal of forms. Ensure adequate air holes are provided.
Sikadur-42 is supplied in factory proportioned units comprising the correct quantities of Part A (Resin), Part B (Hardener) and Part C (Aggregate). Thoroughly stir Parts A and B separately using a slow running drill stirrer with a spiral mixer (max. speed 250 rpm). Decant all of Part B into Part A and mix thoroughly together until a uniform mix is achieved (typically 3 mins). Continue to mix whilst adding Part C slowly. Ensure the attainment of an even colour and an even distribution of aggregate throughout the mix. Do not exceed 250 rpm. Allow to stand for 2-3 minutes to release any entrained air.

Mixed Sikadur-42 should be poured into the void or formwork from one side to avoid the entrapment of air. Continuous grout flow is essential and there must be sufficient grout available before pouring.

Machine Base Plates & Crane Rails: An adequate head must be maintained to ensure continuous flow. Continue pouring until the grout rises above the level of the plate. At no time during application should the grout head be less than 75 mm above the level of the plate. This, as well as adequate vent holes, is essential to ensure no air is trapped.

Anchor Bolts and Dowels: For bolts placed into preformed holes, fill the hole with Sikadur-42 and place into the grout.

Generally, suitable thickness depends on clearance, distance of flow, ambient and substrate temperatures and pour size. Maximum thickness in any one pour (without aggregate addition) is 60mm.

Being an epoxy, no special curing techniques are required. Curing time will depend on the quantity and the ambient temperature. High volumes and high temperatures result in short curing times. Maximum strength is usually reached after 7 days. Do not install equipment or load the epoxy before full cure.

Uncured material may be cleaned from application tools, etc. by using Sika Colma Cleaner (flammable solvent). Cured material can only be removed mechanically.

Flowable mortar

2.0 kg / litre approx.

100% (solvent free)

A : B : C = 2 : 1 : 14 by weight

15 GPa approx. @ 7 days

55 MPa approx.

75 MPa approx.

20 MPa approx.

10 MPa approx.

>4 MPa approx. @ 20°C (cohesive failure of concrete)

>15 MPa approx. @ 20°C

5°C – 30°C (Normal)

20°C-40°C (Long Potlife)

(substrate and ambient temperatures)
**Product Datasheet**

**Revised 6.11.13**

**Consumption/Coverage**

2.0 kg/m² approx. per mm thickness (dependent on surface profile, texture, temperature and wastage)

**Colour**

Part A – Transparent (water white), Part B – Transparent (straw)

Part C – Grey/Sand

Grey when mixed

**Packaging**

14.6 Kg, 29.1Kg and 160Kg upon request.

**Potlife (15kg mix)**

Important Notes

- For detailed information on grouting application and guidelines, refer to Sika Grouting Systems Data Sheet.
- Do not apply Sikadur-42 to surfaces with standing water.
- Do not mix containers.
- Only mix as much as can be applied within the stated potlife.
- Do not dilute the product with solvent as this will affect both the cure and in-service performance.
- Constant in-service temperatures >70°C may affect the performance of the product.
- Do not apply in large areas unless a damp proof membrane is in place.
- If applying in layers subsequent layers must be applied within 24 hours of the first layer being applied and after the previous layer has cooled to ambient temperature.
- If in doubt, consult our Technical Department.
- Minimum age of new concrete, 3 to 6 weeks.
- The temperature at which the Sikadur-42 is stored during the 24 hours before it is mixed will govern it's potlife when mixed.
- Sikadur-42 will rise in temperature when mixing. The extent of this temperature rise will depend upon the volume to surface ratio and the ambient and substrate temperature.
- Compressive strengths etc. of epoxy resins must be qualified by the testing method eg. Test Standard or size of specimen under test and the rate at which the test piece is loaded while under test, as these factors will affect the result markedly. Faster loading rates will generally give higher ultimate loads and vice versa. Also, a specimen at lower temperature will show higher strengths and vice versa.

Handling Precautions

- Avoid contact with the skin, eyes and avoid breathing it's vapour.
- Wear protective gloves when mixing or using.
- If poisoning occurs, contact a doctor or Poisons Information Centre.
- If swallowed, do NOT induce vomiting. Give a glass of water.
- If skin contact occurs, remove contaminated clothing and wash skin thoroughly.
- If in eyes, hold eyes open, flood with water for at least 15 minutes and see a doctor.
- For more detailed information refer to our Material Safety Data Sheet.

Important Notification

The information, and, in particular, the recommendations relating to the application and end-use of Sika's products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The proprietary rights of third parties must be observed. All orders are accepted subject of our terms and conditions of sale. Users should always refer to the most recent issue of the Technical Data Sheet for the product concerned, copies of which will be supplied on request.

PLEASE CONSULT OUR TECHNICAL DEPARTMENT FOR FURTHER INFORMATION.
